

# AYUSH SINGH

[singhayushrs13@gmail.com](mailto:singhayushrs13@gmail.com) — +91 9096959656 — [LinkedIn](#) — [GitHub](#) — [Portfolio](#)

## SUMMARY

---

Driven Software Engineer with hands-on experience in backend development, serverless architectures, and ETL data pipelines. Proficient in TypeScript, Node.js, AWS (Lambda, SQS, DynamoDB), and relational/non-relational databases. Proven track record of optimizing enterprise workflows, building real-time full-stack applications, and migrating legacy systems into high-performance web applications.

## TECHNICAL SKILLS

---

|                   |                                                           |
|-------------------|-----------------------------------------------------------|
| <b>Languages</b>  | JavaScript (ES6+), TypeScript, Java, C++, SQL, VBScript   |
| <b>Backend</b>    | Node.js, Express.js, Classic ASP, REST APIs               |
| <b>Cloud</b>      | AWS Lambda, Amazon SQS, DynamoDB                          |
| <b>Databases</b>  | MongoDB, SQL Server                                       |
| <b>Frontend</b>   | React.js, HTML5, CSS3, Bootstrap, Figma                   |
| <b>Monitoring</b> | Grafana                                                   |
| <b>Tools</b>      | Git, GitHub, Postman, VS Code, Render, Vercel, Cloudinary |

## EXPERIENCE

---

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| <b>Travellex</b><br><i>Trainee Software Engineer</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Feb 2026 – Present<br><i>Mumbai, MH, India</i> |
| <ul style="list-style-type: none"><li>Architecting and maintaining robust ETL (Extract, Transform, Load) jobs for enterprise data processing pipelines and systemic integration frameworks.</li><li>Developing scalable backend services and event-driven serverless microservices leveraging <b>Node.js</b> and <b>TypeScript</b>.</li><li>Optimizing asynchronous message-queue processing pipelines using <b>AWS Lambda</b>, <b>Amazon SQS</b>, and <b>DynamoDB</b> to enhance data processing scalability.</li><li>Configuring monitoring infrastructure, structured application logs, and system health alerts using <b>Grafana</b> to maximize uptime.</li><li>Collaborating with cross-functional engineering teams to optimize data ingestion speed and guarantee transactional reliability.</li></ul> |                                                |
| <b>Digital ASPL</b><br><i>Software Developer</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | May 2025 – Nov 2025<br><i>Vasai, MH, India</i> |
| <ul style="list-style-type: none"><li>Developed, optimized, and maintained enterprise web software using <b>Classic ASP</b>, <b>VBScript</b>, and <b>SQL Server</b>.</li><li>Engineered highly performant backend business logic, secure form processing workflows, and comprehensive data validation schemes.</li><li>Refactored and optimized complex, legacy relational database queries to drastically cut query latency and boost overall application stability.</li><li>Resolved high-priority production bugs, delivered features under agile timelines, and improved documentation for legacy codebases.</li></ul>                                                                                                                                                                                     |                                                |

## PROJECTS

---

**CareerCraft — AI Career Guidance Platform**  
*React.js, Node.js, MongoDB, AI APIs*

- Developed an AI-powered SaaS application that cross-references candidate resumes with industry jobs, mapping skill gaps and rendering interactive roadmaps.

- Implemented an intelligent AI career counseling chatbot, custom RBAC (Role-Based Access Control) systems, and granular telemetry on admin dashboards.
- Designed fluid, highly responsive frontend interfaces backed by modular, secure, and fully documented REST APIs.

### CVVortex — AI Resume Builder

*React.js, Node.js, MongoDB*

- Built a real-time, ATS-optimized resume production tool showcasing real-time scoring metrics, JWT-based user authentication, and native PDF generation.
- Structured lightweight state-management workflows on the frontend to ensure lag-free rendering during rapid document edits.
- **Links:** [Live Demo](#) — [GitHub](#)

### Chess Game — Real-Time Multiplayer Chess

*JavaScript, Socket.IO, Chess.js*

- Engineered a low-latency web multiplayer environment implementing WebSockets via Socket.IO for immediate state synchronization.
- Incorporated rigorous match validation mechanics and legal move computations on the server layer utilizing Chess.js.
- **Links:** [GitHub](#)

### WanderLust — Travel Marketplace

*Node.js, Express.js, MongoDB, Cloudinary*

- Created a high-traffic full-stack listing marketplace complete with custom secure sessions, user cookies, and absolute multi-tier route protections.
- Integrated Cloudinary SDK for optimized image processing, lazy loading, and schema validations.

## EDUCATION

---

### Bachelor of Science in Information Technology

*2023 – 2026*

Thakur Ramnarayan College of Arts & Commerce, Dahisar

**CGPA: 8.72/10**

### Higher Secondary Education (Science)

*2021 – 2023*

St. Anne's Junior College, Vasai

**HSC: 56.7%**

*Specialization: Computer Science*

## CERTIFICATIONS & ACHIEVEMENTS

---

- **AWS Serverless Lambda Functions** — [Certificate of Completion via Udemy](#) (March 2026).
- **JavaScript Certificate of Excellence** — Issued by Programming Hub (2024).
- **DSO-Level Cricket Player** — Selected to represent school in District Sports Office (DSO) competitive tournaments.
- **Technical Hackathons** — Actively competed in university-level development hackathons and algorithmic innovation rounds.
